DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claims 1-19 is withdrawn in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 1-19 are rejected under 35 U.S.C. 101 because the disclosed limitation “wherein the distance separating the transponder platforms is constrained to a range wherein the local reference clocks for all subscribers have substantially the same phase with respect to the master reference clock” would be impossible and unfeasible even if it were possible. In view of the movement of multiple subscribers, applicant would need to constantly change this distance, which would be impossible. Applicant has also failed to disclose how the process of placing these multiple transponders other than a required distance. Also if the method of constraining the distances were achievable, it would eliminate the steps applicant claims in this application and prior application 09/550, 505 for synchronizing CDMA communications.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a.) Agarwal et al. discloses in US Patent 6,529,485 B1 Method for Generation of Accurate Doppler-Free Local Clock In Satellite/Wireless Networks.

b.) Garogalo et al. discloses in US Patent 6,633,590 B1 Method of Synchronizing a Reference Clock of a Ground Station and a Clock of a Remote System.

c.) Hagen et al. discloses in US Patent 6,757,546 B1 Synchronization Method and Apparatus for Multi-Platform Communication System.

d.) Yamawaki discloses in US Patent 5,875,402 Time-Synchronous Communication System.
